

# Newton Toney Groundwater Level 2023-24

## Groundwater Report w/b 19-Feb-2024

The past week has been very wet (actual rainfall not available from local stations). The groundwater responded quickly by rising to 11" (29 cm) below ground level. The Bourne also responded to the rain by rising about 8 inches and is still high. Groundwater levels at Hazelberry and Everleigh have risen a little from last week but are now stable. QMF data not available this morning. More rain is forecast later this week which may cause further rises to groundwater and river.  
Next report due: w/b 26-Feb-2024
